Introduction

- ◎ Seizures occur frequently in critically-ill children, but can go undetected in 56% of these patients
- ◎ Gold-standard seizure detections using multi-channels Electroencephalogram (EEG) require :
 - Trained clinical physiologists
 - Highly specialised neurologists

Aim: To provide front-line clinicians a user friendly and accurate real-time tool for the identification of seizures

Methods

EEG recordings were provided by Royal Hospital for Sick Children, Edinburgh, Scotland.

Results & Future work

Average Performance in 20 Subjects

Future Work

Acknowledgement

- Medical Research Council- Confidence in Concept
- Clinical Neurophysiology Department of Royal Hospital for Sick Children
